

2009-2010

Research indicates that school climate can be either a positive influence on the learning environment or a significant barrier to learning. In AISD, schools that performed better on TAKS also had higher student climate ratings (Schmitt & Carney, 2008). These survey results provide campuses with feedback about how students feel about their school's educational environment. Longitudinal data are provided, where applicable.

The image below displays factors that are known to be related to student academic growth. In this report, we focus on the role of school climate for students (circled in red), which has been measured with six survey subscales: academic self-confidence, adult fairness & respect, teacher expectations, teacher support, student engagement, and behavioral environment.

In Spring 2010, 665 students returned surveys for Goryzkci, representing 80% of eligible students from Goryzkci (compared to the district Middle School response rate, 72%). The table below shows the total number and percentage of students surveyed from each eligible grade at Goryzkci in 2009-2010.

The Figure below compares the percentage of eligible students at Goryzkci (dark purple) to the percentage of students at Goryzkci who completed the survey (light purple), by ethnicity.

Table 1. Response Rate by Grade, 2009-2010

Grade	Number of Students	Response Rate (%)
6h	346	89%
7h	256	77%
8h	232	70%
Total	834	80%

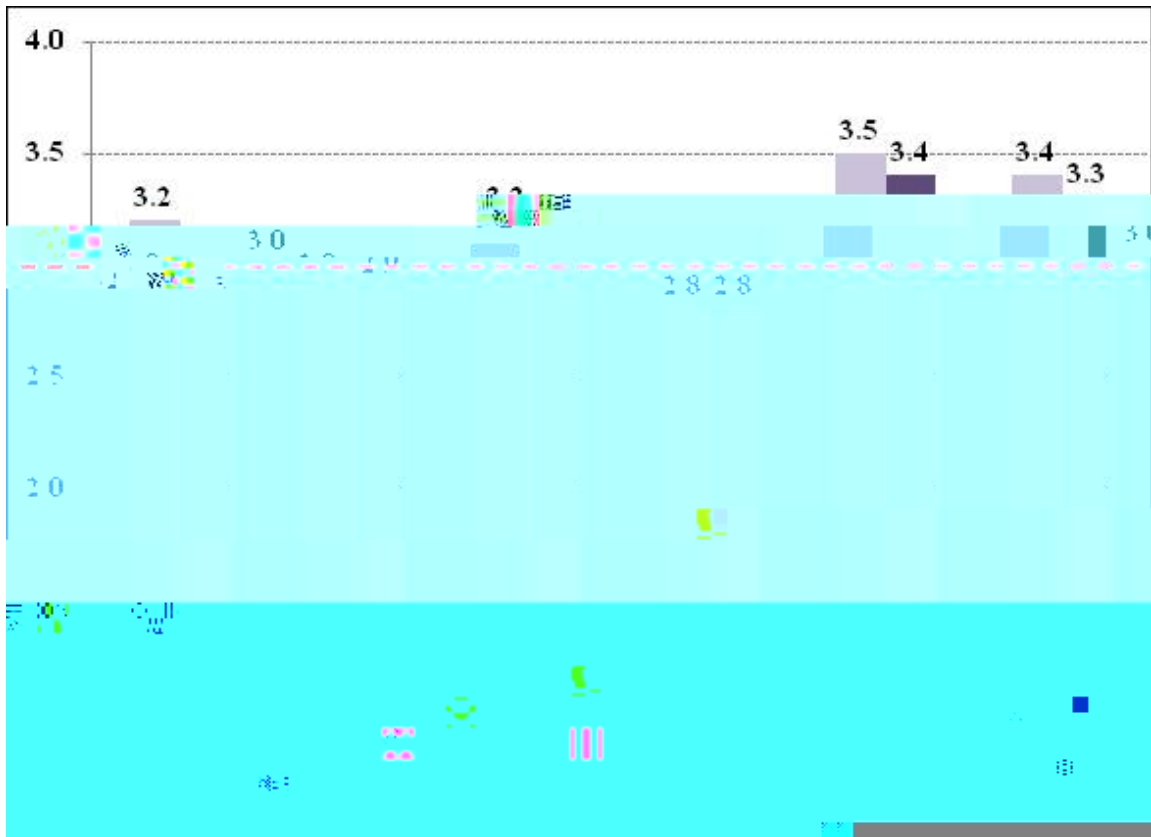

Percentage of Respondents and Students by Ethnicity for Goryzkci, 2009-2010

Survey results for Goryzkci for the 2009-2010 school year are presented on the next page. Please note the green and red text boxes that highlight specific areas in which Goryzkci excels, as well as areas in which Goryzkci can improve. The appendix provides more detailed information regarding Goryzkci's student climate survey results from 2007-2008 through 2009-2010. Please review the individual items on each subscale with particular attention to how Goryzkci's average ratings have changed or remained consistent over time. Please note that some subscales have changed from previous years, making longitudinal comparisons inappropriate for some items and subscales. For items and subscales where longitudinal data are available, statistically meaningful changes are flagged with + or - symbols. Please share the results of this report with all campus staff and your Campus Advisory Council to inform campus improvement planning.

The graph below depicts Goryzkci's average student climate survey ratings, compared with average ratings for students across all Middle Schools in 2009-2010. Scores over 3.0 are desirable, as indicated by the red dashed line. The first step in improving these characteristics is to examine the item-level scores for each area (see Appendix).
