

2009-2010 AISD Student Climate Survey

Research indicates that school climate can be either a positive influence on the learning environment or a significant barrier to learning. In AISD, schools that performed better on TAKS also had higher student climate ratings (Schmitt & Carney, 2008). These survey results

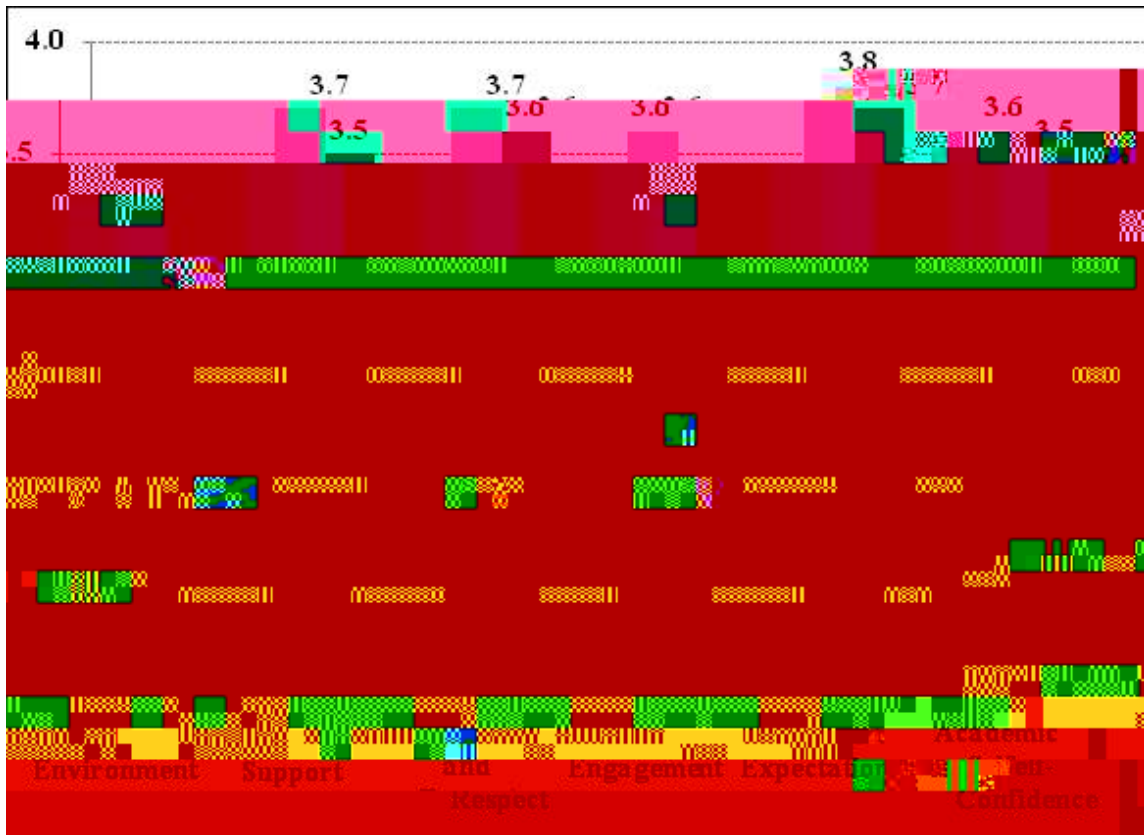

In Spring 2010, 200 students returned surveys for Houston, representing 50% of eligible students from Houston (compared to the district Elementary School response rate, 87%). The table below shows the total number and percentage of students surveyed from each eligible grade at Houston in 2009-2010.

Table 1. Response Rate by Grade, 2009-2010

Houston	
Grade	Population

The graph below depicts Houston’s average student climate survey ratings, compared with average ratings for students across all Elementary Schools in 2009-2010. Scores over 3.0 are desirable, as indicated by the red dashed line. The first step in improving these characteristics is to examine the item-level scores for each area (see Appendix).

Student Climate Survey Subscales for Houston and all Elementary Schools, 2009-2010

Note. The light purple bars represent 2009-2010 data for Houston and the dark purple bars represent 2009-2010 data for all Elementary Schools.

Houston’s highest subscale score on the 2009-2010 Student Climate Survey was for Teacher Expectations, a new subscale in 2009-2010 that measures the expectations students perceive from their teachers. It is believed that Teacher Expectations are associated with academic achievement. Please think about what your school does to foster high expectations, and share your strategies with others.

Houston’s lowest subscale score on the 2009-2010 Student Climate survey was for Behavioral Environment, which measures the extent to which students report feeling safe and respected at Houston. Higher ratings of Behavioral Environment have been associated with academic achievement.
