

## 2009-2010 AISD Campus Staff Climate Survey

### Houston Elementary School

A healthy school climate is characterized by positive relationships among students, all campus staff, and the community. School climate is a key factor in several important outcomes including student achievement, reduced violence, higher morale, and faculty trust (Hoy, Smith, & Sweetland, 2002). More specifically, research in AISD indicates that staff climate survey results are related to student Texas Assessment of Knowledge and Skills (TAKS) performance in both math and reading (Bush-Richards, Cornetto, & Schmitt, 2008; Schmitt, 2006). The figure below represents how campus climate can facilitate student academic growth.

The image below displays factors that are known to be related to student academic growth. In this report, we focus on Staff Climate (circled in red), which has been measured with seven survey subscales: Teacher Support, Community Engagement, Collegial Leadership, Professional Teacher Behavior, Achievement Press, General Climate and Data Vision.

The graphs below depict Houston’s staff climate ratings over time, as well staff climate ratings across all Elementary Schools in 2009-10. Scores over 3.0 are desirable, as indicated by the red dashed line in the graphs below. The first step in improving campus climate is to examine the score for each area (Figure 2).

For 2009-10, Houston staff rated **Collegial Leadership** the highest of all climate areas. Alternatively, Houston staff rated **Achievement Press** the lowest of all climate areas. In the appendix, you will find the individual items that make up **Collegial Leadership** and **Achievement Press**. Examine these items and consider possible areas for campus improvement. Make note of any item with an arrow, which indicates an average rating that is meaningfully higher or lower than that of the previous year. Discuss these areas of strength and challenge with staff, and note the ways in which initiatives on campus have addressed or could address these issues during the current or next school year.

Houston’s highest subscale score on the 2009-10 staff climate survey was Collegial Leadership, which measures the extent to which principals treat teachers and staff with openness, egalitarianism, and friendliness and set clear expectations for performance. Collegial Leadership has been linked to student academic achievement.

Houston’s lowest subscale score on the 2009-10 staff climate survey was Achievement Press, which measures the degree to which students, parents, teachers, and principals foster a climate of high academic rigor on their campuses. Achievement Press has been linked to student achievement and teacher engagement in AISD. For more research on achievement press and ways to improve your campus’ ratings, please visit:
