

Research indicates that school climate can either be a positive influence on students' learning environment, or can serve as a significant barrier to students' learning. Indeed, elementary school teachers in Austin Independent School District (AISD) whose students provided positive ratings of behavioral environment, teacher support, adult fairness and respect, and academic self-confidence had students who made greater growth on TAKS in 2009-2010 than did their peers whose students rated school climate less favorably.*

The following tables show the total number of surveys students at Lanier returned in 2010-2011 (Table 1), the response rate by grade (Table 2), and the distribution of responses by race/ethnicity compared with the population (Table 3) for students at Lanier.

Table 1: Survey Return Summary		
# of surveys returned	339	8,315
# of students	1,226	14,040
% of students represented	28%	59%

Population data reflect enrollment as of the PEIMS snapshot date in October 2010. Students' grade level and ethnicity were self-reported. The new "ethnicity/race" reporting allows for students to first choose their ethnicity (Hispanic/Latino or non-Hispanic/Latino) and then choose one or more of five race values.

Table 2: Response Rate by Grade			
grade	# of students	# of responses	response rate
9th grade	547	119	22%
10th grade	337	113	34%
11th grade	342	106	31%

Table 3: Distribution of Responses by Race/Ethnicity		
Ethnicity	% of population	% of responses
Hispanic/Latino	80%	79%
Race		
American Indian/Alaskan Native only	63%	15%
Asian only	2%	7%
Black/African American only	11%	27%
Native Hawaiian/Other Pacific Islander only	0%	5%
White only	20%	37%
Two or more races	4%	9%

Response options ranged from 1 = to 4 = . It is desirable to have a response of at least 3.0. Subscale comparisons across years are no longer available due to the addition of items 29 and 30, which are from the Control subscale of the Tripod survey. The survey was developed by Ron Ferguson and has been administered to schools across the country over the last decade. The Tripod survey was used in the Gates Foundation's Measures of Effective Teaching (MET) Project. The survey is designed to assess the degree to which students agree with a variety of statements designed to measure the following dimensions: caring, captivating, conferring, controlling, clarifying, challenging, and consolidating. For more information, please visit: <http://www.metproject.org/partners#cambridge>. Response options for the Tripod items were changed to reflect the 1 = to 4 = scale.
