

2009-2010 AISD Student Climate Survey

Palm Elementary School

Research indicates that school climate can be either a positive influence on the learning environment or a significant barrier to learning. In AISD, schools that performed better on TAKS also had higher student climate ratings (Schmitt & Carney, 2008). These survey results provide campuses with feedback about how students feel about their school's educational environment. Longitudinal data are provided, where applicable.

The image below displays factors that are known to be related to student academic growth. In this report, we focus on the role of school climate for students (circled in red), which has been measured with six survey subscales: academic self-confidence, adult fairness & respect, teacher expectations, teacher support, student engagement, and behavioral environment.

In Spring 2010, 221 students returned surveys for Palm, representing 74% of eligible students from Palm (compared to the district Elementary School response rate, 87%). The table below shows the total number and percentage of students surveyed from each eligible grade at Palm in 2009-2010.

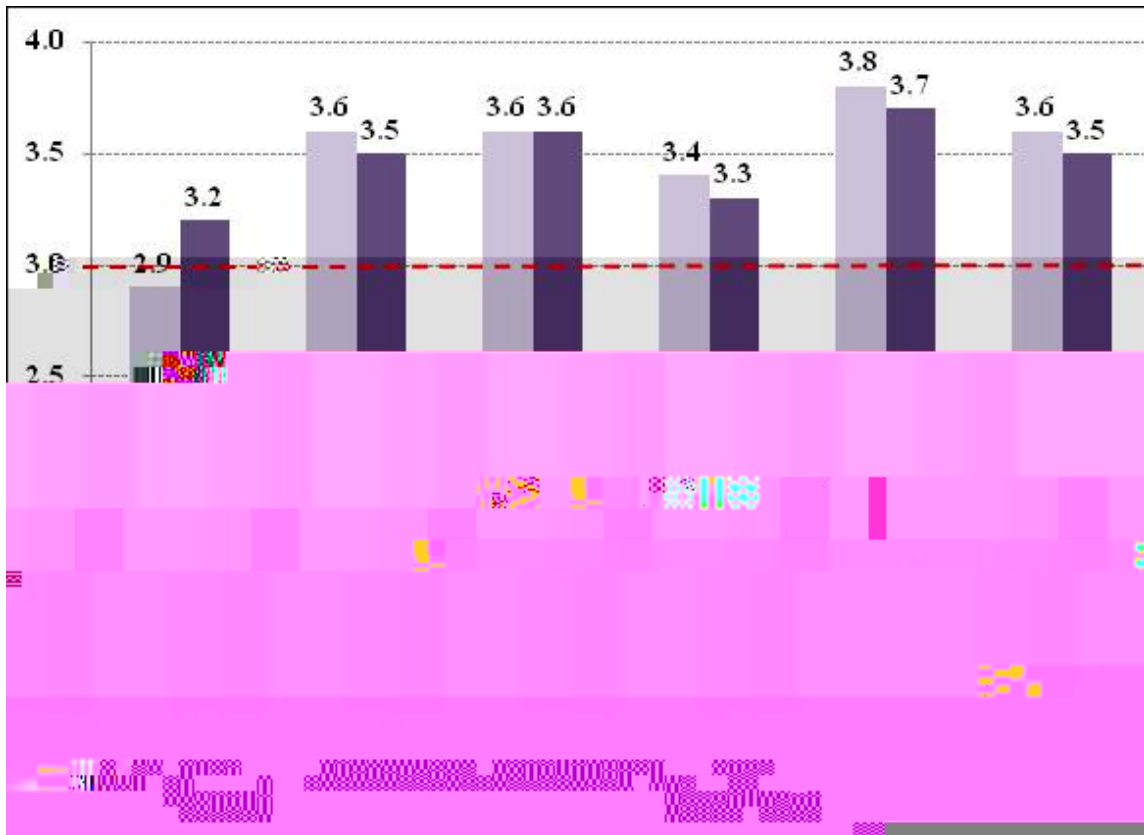

Table 1. Response Rate by Grade, 2009-2010

Grade	Palm	
	Population	Response Rate
3rd	99	83%
4th	92	87%
5th	107	55%
6th	n/a	n/a
Total	298	74%

Survey results for Palm for the 2009-2010 school year are presented on the next page. Please note the green and red text boxes that highlight specific areas in which Palm excels, as well as areas in which Palm can improve. The appendix provides more detailed information regarding Palm's student climate survey results from 2007-2008 through 2009-2010. Please review the individual items on each subscale with particular attention to how Palm's average ratings have changed or remained consistent over time. Please note that some subscales have changed from previous years, making longitudinal comparisons inappropriate for some items and subscales. For items and subscales where longitudinal data are available, statistically meaningful changes are flagged with + or - symbols. Please share the results of this report with all campus staff and your Campus Advisory Council to inform campus improvement planning.

The graph below depicts Palm’s average student climate survey ratings, compared with average ratings for students across all Elementary Schools in 2009-2010. Scores over 3.0 are desirable, as indicated by the red dashed line. The first step in improving these characteristics is to examine the item-level scores for each area (see Appendix).

Student Climate Survey Subscales for Palm and all Elementary Schools, 2009-2010

Note. The light purple bars represent 2009-2010 data for Palm and the dark purple bars represent 2009-2010 data for all Elementary Schools.

Palm’s lowest subscale score on the 2009-2010 Student Climate survey was for Behavioral Environment, which measures the extent to which students report feeling safe and respected at Palm. Higher ratings of Behavioral Environment have been associated with academic achievement.
